	Introduction to Formal Syntax		
(Course Type)	Mandatory		
Target Audience			
(Language of Instruction)	English		
School	School of Foreign Languages		
Prerequisite	Introduction to Linguistics		
Instructor		(Course Webpage)	
Description			
Description	<p><i>Introduction to Formal Syntax</i> is a required undergraduate course to English majors during the 5<sup>th</sup> semester. Conducted in English, this course uses English textbooks and journal papers on syntax. Focusing on main questions and major findings in the field of syntax, this course will explore the hierarchical organization of language, examine syntactic phenomena that are common to world languages, and discuss syntactic constraints that generate structures and meanings of sentences. It aims to give students an overview of syntactic theories, and equip them with analytical skills necessary to tackle syntactic problems. A variety of teaching methods will be used,</p>		

	including lectures, paper reading, practice, discussion, group presentation and assignments, in order for students to acquire basic analytical methods, understand latest progresses in syntactic journals, and apply what they've learned to understanding structures of other languages, including Chinese.
